Exam : **PEGAPCLSA86V2**

Title : Lead System Architect (LSA)
Pega Architecture Exam 86V2

Vendor : Pegasystems

Version : DEMO

NO.1 What two recommendations do you provide to the development team to ensure the performance of the Pega application does not degrade over time? (Choose Two)

- A. Purge and/or archive records based on the company's record retention policy.
- B. Schedule scripts to maintain frequently fragmented tables.
- C. Add indexes to all columns.
- D. Purge workparty UUI index tables periodically.

Answer: A,B

NO.2 you are writing a report that needs to compute the sum of multiple columns and display the result.

The number of columns to sum varies from report to report but does not exceed five.

Which two options can you use to implement this requirement? (choose two)

- A. Develop separate SQL functions for summing two through five columns. Use the appropriate function.
- B. Construct the report to group by the columns to be summed followed by a column that uses SUM.
- C. Implement a declare expression to sum the values and store the result as an additional property.
- D. Develop a SQL function that sums two columns. Recursively apply this function as needed.

Answer: A,D

NO.3 A user reports poor application performance at 5:00 pm yesterday. Which two tools do you use to review the user's session to identify the cause of the poor performance?

- A. My Performance Details report
- B. Alerts log
- C. Tracer
- D. Performance profiler

Answer: A,B

NO.4 The SLA and the customer's system administrator are reviewing scenarios that do not require an application server restart. Select three scenarios from this list. (choose three)

- A. When changing the prweb web.xml file
- B. When changing the system name
- C. When deploying new rules
- D. When deploying rule only hotfixes
- E. When the prlogging.xml file is modified

Answer: C,D,E

NO.5 A recent review of the audit policies log shows that a specific IP address has made a large number of failed login attempts within a few minutes. You suspect that it is an internet bot attack. Select two options you can configure to prevent the bot from accessing your application.

- A. Enable the CAPTCHA security policy
- B. Enable a contact security policy
- C. Enable a failed login attempts security event
- D. Enable an authentication lockout policy

Answer: A,D

NO.6 An application uses LDP authentication users have role and application attributes, but not access group attributes. select the two tasks required to configure the application to uses LDAP attributes to determine the access group for a user

- A. Add a method to the authentication activity to evaluate the decision table
- B. Create a decision table that evaluate role and application attribute value that return access group
- C. Configure the authentication mapping to evaluate the decision table
- D. Create a decision table that evaluate role and application properties that return access group

Answer: A,B

NO.7 XYZ corp expects managers to create a variety of reports. Those reports are always based on the same set of classes, but every report does not use every class in the set. to simplify report creation for managers, you create_____

- A. a declare trigger that restricts report class joins to this set
- B. association rules for the classes in this set
- C. numerous sample reports showing how to join the classes
- D. a template report with every class join predefined

Answer: B

NO.8 You need to create custom workspaces for the manager and for the Customer service representative (CSR), Also, you are asked to display some properties in custom formats that arc not supported by Pega.

Which approach satisfies these requirements?

- A. Create different harnesses for each user's workspace. New portal rules are not needed. Define Specialty Components and use JSON to pass data.
- B. Each access group can use separate portals, harnesses, and sections. Use Specialty Components and use XML to pass data.
- C. Level age the Case Manager and Case Worker as reference points to create new portals, if required. Use Special Components and use JSON to pass data.
- D. Identify the functionality required for each portal. Customize the portal either by modifying the section or harness. Use Specialty Components and use XML to pass data.

Answer: A

NO.9 A case displays recent customer transaction. Different operators often view the recent transactions for the same customer repeatedly throughout the day. the operation to fetch the transactions is resource-intensive, and the source data is updated once an hour. select two options to configure a data page to cache the customer transactions and minimize the operator's wait time. (choose two)

- A. configure the refresh strategy to reload of older than 1 hour
- B. configure the data page scope to node.
- C. configure the data page scope to thread.
- D. configure the refresh strategy to reload once per interaction.

Answer: A,B

NO.10 BigCo receives complaints from existing customers and new prospects that BigCo repi irrelevant offers and products.

Which two Pega solutions do you suggest to help solve this problem? (Choose Two)

- A. Pega Customer Service
- B. Robotic Process Automation
- C. Customer Decision Hub
- D. Pega Marketing

Answer: C,D

NO.11 you need to format required fields with red labels. you configure a custom style in the skin rule.

how do you apply the custom style?

- A. reference the custom style as a parameter in a dynamic layout.
- B. reference the custom style in the required field labels
- C. reference the skin in the required field labels.
- D. reference the skin rule in the dynamic layout with the required field labels

Answer: B

NO.12 when a customer submits a credit card dispute, the application connects to an external service to retrieve all transactions made by the customer. the external service returns transactions ordered by date of transaction, in a descending, chronological order. when a case worker reviews the dispute, the application displays the 10 most recent transactions.

if the case worker does not see the disputed transaction in the list, the case worker can search for additional transactions. the case. the case worker can filter search results on transaction date, the transaction amount or the merchant name the search results display the 10 most recent transactions that satisfy the filter criteria. the case worker cannot paginate through the results.

how do you configure the data page to satisfy all the requirements in the scenario?

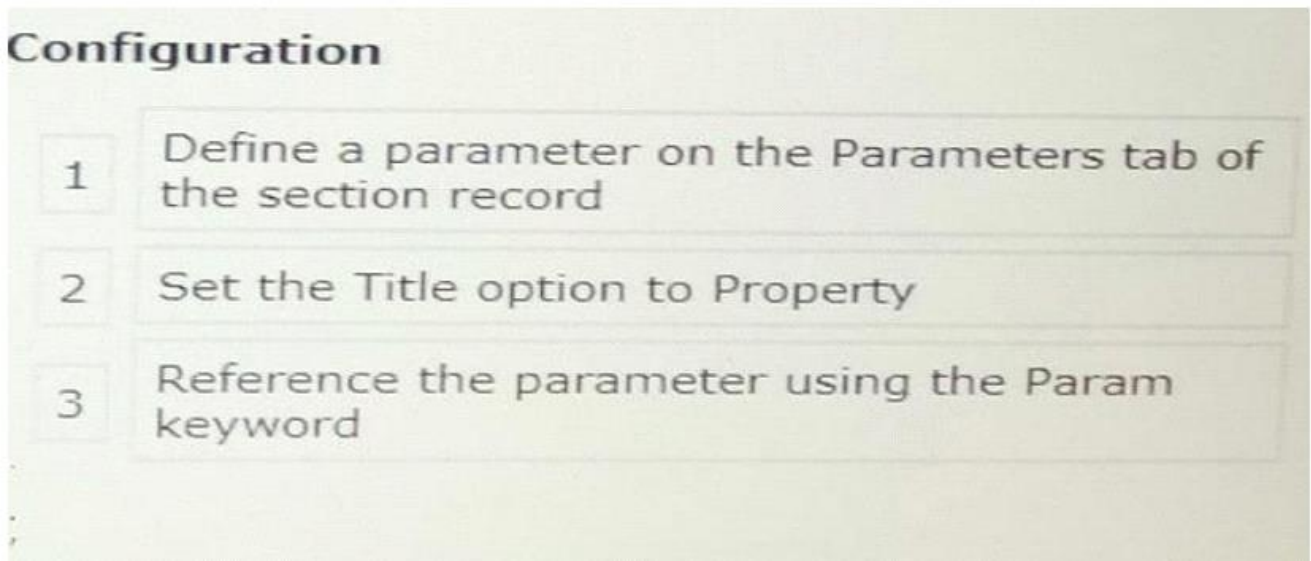

- A. create a node-level data page with parameters that uses a report definition as its source
- B. create a node-level data page that uses a connector as its source.
- C. create a thread-level data page with parameters that uses a connector as its source.
- D. create a thread-level data page that uses a report definition as its source.

Answer: C

NO.13 You are configuring the container settings of a display a title. The title is based on the type of loan requested

Answer:

NO.14 which two of the following action are required to configure your application to support SSO authentication ?

- A. configure required mapping between LDAP attributes and operator properties
- B. configure model operator records for each access group in your application
- C. configuring the authentication activity to identify the operator in the system
- D. configure the application record to use external authentication

Answer: A,C

NO.15 What two features do activities and functions share? (Choose Two)

- A. Ability to be versioned
- B. Ability to be parameterized
- C. Ability to be circumstanced
- D. Ability to be called directly from a decision table

Answer: A,B

NO.16 Table a contains customer information. Table B contains complaints submitted by customers. Table C contains positive feedback submitted by customer.

You are tasked to write a report that list all rows in Table A where, per customer, the number of rows in Table B related to Table A are greater than the number of rows in Table C related to table A.

Which method creates the report that executes with the best performance?

- A.** Define two subreports, one where table B users "Do not Join", and one where Table C users "Do not Join", In the main report count the rows from each subreport, then only include rows where the count from the Table B subreport than the count from the Table C subreport.
- B.** Join table A to Table B and C using include all rows in join class. Count the Join column from both Table B and Table Only include rows where the first count is greater than the second.
- C.** Define two subreports: one that counts rows in Table B relative to Table A, and on that counts the rows in table C relative to Table Only include rows in the main. Report against table A where the table B count is greater that the Table C count.
- D.** Join table A to Table B and C using include all rows in this class. Count the Join column from both Table B and Table C. Only include rows where the first count is greater than the second.

Answer: C
